Description

These Memory devices are JEDEC standard registered DIMM modules, based on CMOS DDR SDRAM technology.
These devices consist of CMOS DDR SDRAMs in TSOP or FBGA packages on a 184-pin glass epoxy substrate.The memory array is designed with Double Data Rate (DDR) Synchronous DRAMs for server applications.
The pipelined, multibanked architecture of DDR SDRAMs allows for concurrent operation, thereby providing high, effective bandwidth.
Decoupling capacitors are mounted on the PCB board in parallel for each DDR SDRAM, which provides proper voltage supply impedance over the whole frequency range of operations, in accordance with JEDEC specifications. These modules feature Serial Presence Detect (SPD) based on a serial EEPROM device.
